Tenant Satisfaction Measures

2023/24 year-end results

Babergh District Council

Introduction

Following the long-awaited implementation of consumer regulation on 1 April 2024, Housemark has published an exclusive first look at Tenant Satisfaction Measures (TSMs) for the full year. All registered providers are required to report TSMs using standardised satisfaction and management figures for the year to March 2024.

While the Regulator of Social Housing (RSH) is due to publish a report in the autumn, as the sector's data experts, we have been tracking TSM performance for the past year. In total, 221 landlords took part in this exercise, managing around 2.3 million properties – more than half of all social housing in England.

Based on results up for the first full year of TSM reporting (April 2023 – March 2024), this report is exclusive to participating landlords and shows your results compared to national figures and a peer group of similar organisations. We have curated a peer group for you based on stock size, landlord type and location.

The report shows headline results for all 22 TSMs. Tenant perception survey satisfaction results are based on respondents from low cost rental accommodation. All data collected uses the Regulator of Social Housing's [TSM guidance](#), with definitions from its TSM Technical Guidance. If you have any questions about this report or other benchmarking opportunities, please do get in touch at data@housemark.co.uk.

Technical note

Housemark collected data from over 200 landlords choosing to submit TSM results for the period April 2023 to March 2024. The data collection was based on the Regulator of Social Housing’s definitions from its TSM Technical Guidance.

Data collection included headline results for all 22 TSMs with a small number of contextual fields. Tenant perception survey satisfaction results are based on responses from low cost rental accommodation. Housemark has conducted a thorough data validation and quality assurance check on this data.

Peer groups

This summary compares your organisation against a broad peer group. The peer group was assigned to your organisation with two key criteria in mind that:

- 1 The profile and characteristics of the organisations in the group are similar and likely to show different results to other peers
- 2 The peer groups are small enough to be specific whilst ensuring there are enough peers to generate robust quartile results.

Quartiles

Quartile results for the sector and your broad peer group are presented in this report to indicate how your organisation compares to the other participants. These have been calculated using polarity with quartile one representing the best performance. Results are only calculated if six or more organisations have submitted data for that particular measure.

With the data points arranged consistently in numerical order, the median is the middle value and the quartiles divide the dataset into four equal parts. The 1st quartile group represents the organisations with the best performing values and the 4th quartile group, the lowest. Measures that represent volumes are neutral and for these quartile 1 represents the smallest values and quartile 4, the largest.
